NEW HORMONES FOR STARTING AND TRANSPLANTING SEEDS, BULBS, PLANTS & TREES

ROOTONE Reg. U. S. Pat. Off.

This is a new hormone plant powder. It is a root-forming stimulant when applied to cuttings, seeds, or bulbs. Being a powder it gets its root-forming activity from the synthetic hormones or growth substances which it contains. It is very easy to use; simply dust on the seeds, bulbs, or cuttings and the most sluggish seeds, like those of perennials, are accelerated in growth and produce healthier root systems. This means healthier plants, more rapid growth, and earlier development. Full directions with each order. **¼-oz. pkt., 25c; 2-oz. jar, $1.00; 1-lb. can, $5.00, postpaid.**

TRANSPLANTONE Reg. U. S. Pat. Off.

This is a vitamin hormone stimulant for plants. It invigorates old roots, multiplies new roots, and reduces wilting and loss on transplants. Transplantone is a water-soluble powder containing Vitamin B-1 and other parts of the vitamin B fractions, plus certain plant hormones which are active in root formation. These chemicals are very vital to the growth of plants, particularly of roots. Plants respond to an extra supply of "growth factors" such as those in Transplantone. Simple to use, full directions with each order. **1-oz. can, 50c; 3-oz. can, $1.00; 1-lb. can, $4.00, postpaid.**

ASPARAGUS—PARADISE

New, Sensational, Matures 1 Year Earlier, Exceptional Quality

This new Early Maturing Variety produces a crop one year earlier than any other variety. Those who have seen this asparagus growing have been amazed to see the straight, crisp, large stalks that were produced from seed planted only TWO YEARS BEFORE. An exceptionally strong, vigorous producer. Growers say it produces twice the crop of ordinary asparagus. This variety is rust resistant. It retains its fresh flavor. It brings returns one year earlier than other varieties and because of its size, large crop and fine, mild flavor, this NEW VARIETY will quickly supersede all others. A new, better variety that will take the country by storm. An excellent variety for home gardens and market gardeners. **Pkt., 15c; ½ oz., 45c; oz., 70c; ¼ lb., $2.00.**

TOMATO
EXTRA EARLY HARKNESS

Award of Merit

The Tomato for the Cold Northwest

Extra Early Harkness—This wonderful new Extra Early Tomato has received the All American Award of Merit, also received the Western Market Gardeners of Canada Award of Merit as the most promising variety for the cold Northwest. It is decidedly early. It has also proven itself a non-cracking type. It is medium in size, very smooth, firm, meaty and slightly flattened. It is without doubt the most wonderful short season tomato. An excellent variety. **Pkt., 25c; 2 pkts., 40c.**

ROSELLE

"Annual Currant Jelly Plant"

Make delicious jelly from the leaves and branches of this wonderful new plant. The calyx surrounding the seed pod is used for making jelly and jam, considered by many to be superior to Guava or Currant jelly. It is grown extensively in Australia and the Famous Queensland jelly is shipped to all parts of the world. After the flower petals fall, remove calyxes from seed pods. To four solid quarts of calyxes add 1 quart of cold water, boil until tender. Strain through cheese cloth, but do not squeeze. Measure an equal number of cups of sugar, which should be placed in the oven to heat. Boil the juice 20 minutes, add the hot sugar, boil 3 minutes, strain once more into glasses. Sow early in April in sunny location where the plants are to remain, in rows 4 ft. apart and thin to 2 ft. in the row. **Pkt., 10c; oz., 50c; ¼ lb., $1.75.**

PARSLEY EVERGREEN

Award of Merit—A Wonderful New Variety

Evergreen is a strong growing parsley with large, dense, dark green foliage. The leaves are very large and dense and are coarsely cut, but closely curled. Evergreen is more frost resistant than the other varieties. It is very uniform with lots of vigor and is well adapted for market gardeners and general use. **Pkt., 10c; oz., 20c; ¼ lb., 65c; ½ lb., $1.15; lb., $2.00.**

Tomato—Extra Early Harkness

PEPPER—Rocky Ford—(Special Mention)

Earliest Pepper Known

The outstanding merits of this pepper are its earliness. Fruits large, oblong, usually 4½ to 5 inches long and 3½ inches in diameter. Weight 7 to 8 ounces. Earlier than California Wonder, thick walled. Color bright, deep red. It makes a large plant, fruits high enough to avoid contact with the soil. A prolific bearer. Recommended for home and market garden. 68 days. **Pkt., 10c; ¼ oz., 25c; ½ oz., 40c; oz., 65c; ¼ lb., $2.00.**

A GOOD GARDEN ALWAYS PAYS

S. N. & S. Co's. BEANS, Stringless and Tender

(2 lbs. to 100 feet in drill, or 150 hills; 120 lbs. to the acre, in drills)

Beans require a light friable soil with plenty of moisture. In the garden, the soil should be made mellow and rich, and kept so. For garden, a succession of sowing can be made from the first week in May until the middle of June. Sow in rows 18 to 24 inches apart and cover from 1 to 2 inches deep, but not more. Keep the pods picked and the vines well watered and the Beans will continue bearing much longer.

DWARF, OR BUSH, WAX OR YELLOW POD VARIETIES

It yields a crop in good weather or bad. 55 days. **Pkt., 5c; ½ lb., 25c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

HOW TO PLANT—The soil should be rich and deeply plowed. Sow in rows 14 to 20 inches apart and about 1 to 1¼ inches deep. As soon as the plants have the fifth and sixth leaf, thin to one plant each 3 inches apart. Then irrigate. Cultivate often and do not water again until absolutely necessary as the soil will dry from the surface down and the top roots will follow. Cultivate once a week for best results. Keep clean and remember that cultivation is the next thing necessary after the best seeds and the two are necessary for success. **(One ounce to 100 feet of drill, 5 to 6 lbs. per acre, in drills; 15 to 20 lbs. to the acre broadcast.)**

THE SEVEN BEST VARIETIES OF SWEET CORN FOR MONTANA AND THE NORTHWEST

One pound for 100 hills or 150 to 200 feet of drill; 15 pounds to acre; 1 pound is a little more than a pint; 2 pounds a little more than a quart.

Sweet Corn is very sensitive to frost and should not be planted until danger from freezing is past or about the middle of May in Montana. A rich, warm, good ordinary soil will raise excellent Sweet Corn, if it is deeply and thoroughly worked before planting. If planted in rows, make the rows three feet apart and 12 to 16 inches apart in the row; cover one inch deep with fine soil firmly pressed down. If planted in hills, make the hills three feet apart each way, and plant four to six kernels to the hill. Hoe frequently and when six inches high cut off all the suckers so as to leave three or four plants to the hill; do not let the plants overcrowd. Give frequent and thorough but shallow cultivation until the tassels appear. In cooking Corn use boiling water; do not cover the vessel and do not cook more than ten minutes. "Use no salt"—a pinch of sugar will add to the natural sweetness.

EXTRA EARLY VARIETIES

Golden Gem—Earlier than any other Sweet Corn of the Golden Bantam varieties. The stalks are dwarf, 2 to 3 ears on a stalk, average ear 6 inches in length and eight rowed. Kernels are quite deep, meaty, rich golden yellow, very tender and of the sweetest and most sugary flavor imaginable. The greatest advantage, however, is its extreme earliness. Very valuable to the market gardener and home gardener where late corns will not mature. 60 days. **Pkt., 5c; ½ lb., 20c; 1 lb., 35c; 2 lbs., 60c; 5 lbs., $1.25.**

With these qualifications this wonderful Corn can be grown to maturity wherever Golden Bantam can. In addition to its merits as a table Sweet Corn this variety is destined to be a popular variety on account of its extreme earliness, which is ten days to two weeks earlier than the Golden Bantam. **Price: Pkt., 10c; ½ lb., 25c; 1 lb., 40c; 2 lbs., 70c; 5 lbs., $1.50.**

LETTUCE

Scand.—Salat.

EVERY GARDEN CAN GROW THIS FINEST OF HEALTH FOODS

(¼-ounce to 100 feet of drill — 3 pounds to the acre)

Culture—For the earliest lettuce sow seed of the loose leaved varieties. Sow thinly and when the young seedlings are large enough for the table they may be thinned as used. In this way space is provided for normal growth. For succession sow every two weeks.

The conditions necessary to grow good head lettuce are rich soil, plenty of moisture, and steady growth until the heads are ready to use. A check in growth from lack of nourishment or moisture usually means no heads. Seed may be sown in boxes indoors or in the hot bed and set out as soon as weather permits, or sowing may be made in the open ground as soon as soil and weather conditions are favorable. Do not cover seed more than ¼ to ½ inch deep. The plants should be thinned to 10 inches apart in the row, a light application of fertilizer such as nitrate of soda used after the plants have made some growth will be found beneficial. All our varieties of lettuce are excellent for the home garden.

S. N. & S. Co's. TENDER GREEN PEAS

Ger.—Erbsen. (1 pound to 100 feet of drill—80 to 100 pounds to the acre) **Scand.—Erter.**

Peas are quite hardy and for early crop sow as soon as the ground can be worked. Then sow in succession every two weeks until the first of August. They require moderately rich soil but not excessively rich or wet, or they will run too much to vine and will not bear heavily. The dwarf varieties can be planted in rows 12 to 18 inches apart, and the tall varieties 3 feet apart. The tall varieties should be staked by brush or tied up. By using the various classes of Peas and making several sowings of each, good Peas can be had for a long season. The pods should be kept picked; the plant will then continue to bear longer. For late sowing, use Early Dwarf varieties.

Do You Know this Secret . . .

Do you know how to avoid the usual disappointment of a poor Pea crop after mid-July? It is easily to get a big crop of juicy Peas even up to late August. Instead of planting at 2 or 3 week intervals get the following varieties and plant all at the **same** time in early Spring. This will allow a good root system to develop before hot weather comes. The varieties will bear in the order shown to late August.

NEW GUINEA BUTTER BEAN

One of the Most Delicious of All Vegetables

The New Guinea Butter Bean is a wonderful vegetable. Grows to enormous size, one fruit often weighing 15 lbs., and from 3 to 5 feet long. In growth it is similar to the squash, and can be grown in the same manner or can be trellised up. It is more productive than squash and much easier to grow. The vines are always free from disease and insect pests, and stand more neglect and abuse than any other vegetable vine we know of. The fruits should be eaten when small, while the fuzzy growth is yet on. It can be cooked like squash **and fried like egg plant.** When cut up in small pieces and cooked with cream or fried it is most delicious. If trellised up the vines take up so little space, no garden is too small for at least two or three plants. **Pkt., 10c; 3 pkts., 25c; oz., 30c; ¼ lb., 85c.**

NEW FLOWER SEED NOVELTIES

WE OFFER a wonderful list of beautiful new novelties. They will add new beauty, new colors to your garden. You will enjoy watching the development of some flowers you have never seen before. Select now the varieties you want and order promptly before the supply is exhausted.

Calendula—Orange Shaggy

In Calendulas "Shaggy" is probably the most distinct. The closely set, irregularly placed, long narrow petals are beautifully fringed or lacinated, giving the flowers the frilled or shaggy appearance of some Chrysanthemums. The large, flat, rich orange flowers shade slightly towards the medium closed center, the two-tone coloring being quite effective. Flowers are freely borne on long stems. We feel sure "Orange Shaggy" will prove a welcome addition either as a garden plant or as a cut flower. **Pkt., 10c; ¼ oz., 25c; ½ oz., 40c.**

Calendula—Chrysantha or Sunshine

This valuable addition is distinctly different in flower form. It has wide petals, loosely arranged, incurved at center and reflexed at edges, somewhat like a Chrysanthemum. Flowers 4 inches across are clear buttercup yellow on long stems for cutting, about 30 inches tall. **Pkt., 10c; ¼ oz., 30c; ½ oz., 50c.**

Marigold—Goldsmith, (Bronze Medal)

Giant Chrysanthemum flowered of golden orange, branching and with good stems for cutting. Extra large, full double flowers, early and free blooming. Really beautiful. **Pkt., 15c; 2 for 25c; ⅛ oz., 85c.**

Marigold—Spry, (Silver Medal)

Extra dwarf double French variety. May be used for edging, early blooming with very light orange crested center and maroon outer petals. A profuse flowering variety, really grand. **Pkt., 25c; 2 for 40c.**

Marigold—Sunset Giant Mixed

The flowers are the largest known in the Marigold group, 5 to 7½ inches in diameter, the great profusion of flowers makes the showiest spot in the garden. But most remarkable, instead of the usual Marigold odor these flowers have a definitely sweet fragrance. The flowers are loosely formed, with broad petals. The Sunset Giants mixture ranging from deep orange, golden orange, light yellow, lemon yellow and primrose. Sunset Giants are wonderful for cut flowers in the home. **Pkt., 10c; ⅛ oz., 30c; ¼ oz., 50c.**

You'll truly enjoy its dazzling beauty. Unsurpassed as a cut flower. Holds decided freshness fully a week to 10 days. In water it takes on an even more delightful color. Plants are vigorous and free branching with foliage which is practically free from that objectionable Marigold odor. For a real thrill grow it this year. You will have a delightful surprise. **Pkt., 10c; ⅛ oz., 25c; ¼ oz., 40c.**

New Marigold Ferdinand

This new type is single flowered with a neat round crested center of golden yellow surrounded by a single row of broad mahogany-red petals. The flowers are 1½ inches in diameter and are extremely showy. Saucy, colorful and the gayest of our new flowers. **Pkt., 25c.**

Marigold—The New Red and Gold Hybrids

Large extremely double flowers, 2½ to 3 inches across, nearly three times the size of the largest double French Marigolds. The earliest of all Marigolds. The loveliest colored and most outstanding. In addition to the solid red with a brilliance never before seen in Marigolds, there are delightful combinations of red and gold, varying in color according to season and in different flowers on the same plant at the same time from almost pure golden yellow to bright rich mahogany scarlet. Continuous blooming until frozen. The faintly fragrant flowers last two to three weeks either on the plants or in cut bouquets. Plants 1½ feet tall, 2 feet across —a real novelty. **Pkt., 10c; medium pkt., 25c; large Pkt., 40c.**

THREE LOVELY VARIETIES

Life—Is a new Scarlet Cerise Sweet Pea that is different to all other varieties. Life is the brightest and most pleasing of all because of the salmon shading which permeates the color. The name was suggested by the brilliance and sparkle of the coloring. Life does not fade or burn in the strongest sunshine. A strong grower and extremely free flowering. The flowers are bold on long, strong stems. Experts say LIFE is a wonderful SWEET PEA. **Pkt., 15c; ½ oz., 25c; oz., 40c.**

Bridal Veil—"The First Real White Sweet Pea"—This is rather a startling statement but when compared with all other White Sweet Peas, "Bridal Veil" stands out sharply and clearly. It is a pure-clear white of stately magnificence. Bridal Veil is a black seeded white, so is less liable to rot. One is immediately impressed because the giant flowers are so beautifully frilled and graceful. Many of the flowers are duplexed or ruffled and five handsome flowers to each stem is not unusual. **Pkt., 15c; ½ oz., 25c; oz., 40c.**

Lady MacBeth—Is a new and distinct color. It is a dazzling spinel red with golden salmon shading which makes this variety outstanding. The flower is massive and beautifully waved, nicely spread wings and will not sunburn. S.N.&S. CO'S. HARDY MONTANA GROWN FRUIT TREES

A SHORT STORY ABOUT OUR FRUIT TREES

First: They will grow, bear and live longer, stand severe cold and dry climatic conditions better than any other fruit trees money can buy.

Second: It is made possible to grow trees of such hardiness and stupendous size only by our propagation system. Our one and two year old trees are larger and better proportioned than any fruit trees produced in the Northwest. We have never found a sign of root knot or Crown Gall in our fruit trees. We have a typical system of our own in producing these hardier high bearing and high Vitality Fruit Trees.

PEONY—FIELD CLUMPS

We offer for planting this Spring, large undivided Field Clumps of Peonies. Just like planting a specimen tree on your landscape. Specify—red, pink or white.

Each $2.00; 3 for $5.50 postpaid

CULTURE

Ponies may be planted either in the Fall or early Spring in Montana. Dig the soil deeply and cover the eyes or new buds to a depth of not more than three inches. Too deep planting causes poor growth and prevents blooming. Their chcief requirements are good, rich soil and a sunny or partly shaded location. Give a liberal supply of water during growing season. Do not disturb extensively by cultivation.

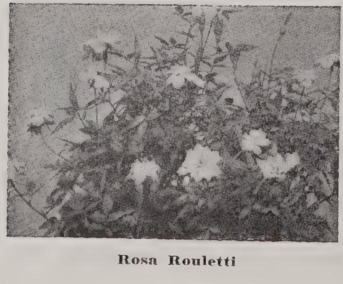
WINTERING ROSES. After the first good heavy frost, bundle the branches together, cut them back to about 18 to 20 inches, mound earth around the plants up to 6 or 8 inches, or higher if practical, spread manure in the hollows between plants. Later on, when the ground is frozen, add a covering of leaves, straw, salt, hay or cornstalks to keep the ground frozen and as a protection against sun and wind. In the spring, remove covering a little at a time, first straw or leaves, then the coarse part of the manure, and finally level the soil when danger of hard spring frosts is past.

Climbers winter well if taken down from their support and laid flat on the ground where they can be covered with earth or heavy straw.



Rosa Rouletti

CULTURAL HINTS

WATERING. Roses like plenty of water. Flood the beds once a week by placing the hose on the bed and letting it run slowly so that water may reach deep to the roots. Avoid wetting the foliage, especially in the evening.

SPENT BLOOMS should be removed, cutting the stem above the first complete set of five leaves. If long-stemmed blooms are desired for cutting, remove old flowers so that two sets of leaves remain on the stalk. The next crop of blooms will spring from these eyes.

FERTILIZERS. Roses are heavy feeders and as our Pot Roses are established when you get them they will respond to a "complete" fertilizer, such as Vigoro or Stim-U-Plant about 30 days after planting. Apply very lightly (a teaspoonful per plant) but often, and water liberally after each application.

CELTUCE

Is easy to grow in the home garden. Plants grow quickly, forming a rosette of light green leaves which may be used when young, as "Greens". In less than 90 days after seed is sown, the central stalk is usable and will be found most tender at this age. The stalks are solid, skin greenish white and is very succulent, most delicate pale green and crisp. Make first sowing as soon as ground can be worked in the spring. Succession sowings of a week or ten days will give a continuous supply. **GROW CELTUCE—** It is new, it is good, it is interesting and it is healthful; the best new vegetable for 1942. **Pkt., 15c; ¼ oz., 35c; ½ oz., 65c; oz., $1.25.** When ordering ask for the three favorite recipes.
